THE FROSTBASTION

Aerial dreadnought • Mobile fortress • Winter operations

PRIMARY MISSION

Keep fighting where ground bases cannot survive. Reinforce fortresses, cover evacuations and deploy marines behind enemy lines.

LIFT & STABILITY

Eight armored lift engines. Redundant stabilizing thrusters keep the hull level through violent crosswinds.

TWIN FLIGHT DECKS

Reconnaissance craft, strike squadrons, boarding shuttles and low-observable interceptors launch from two upper flight decks.

SUSTAINED OPERATIONS

Ammunition vaults, field hospitals, maintenance bays, command rooms, fuel reserves and spare parts support an isolated air group for weeks.

DEPLOYMENT & LIMITS

Winter mobilizations over Skold; follows the front in wartime. Slow, enormous and impossible to hide. Protection relies on armor, redundancy and firepower.

“If the Frostbastion is overhead, the weather is no longer the worst thing in the sky.”
